

Bactogut

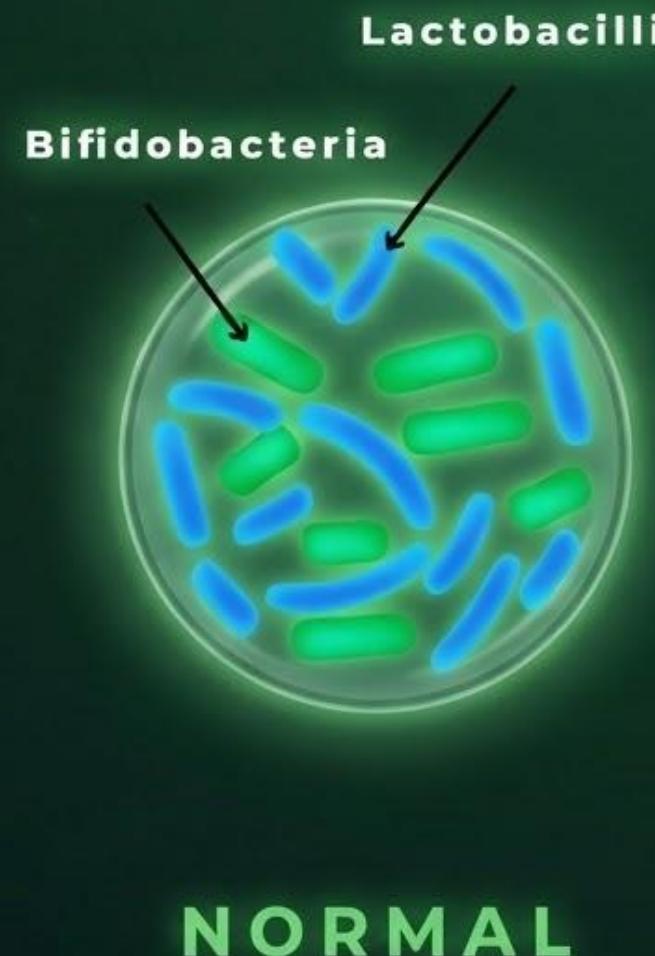

The Ultimate Gut Shield

Advanced 13-Strain Probiotic Formula

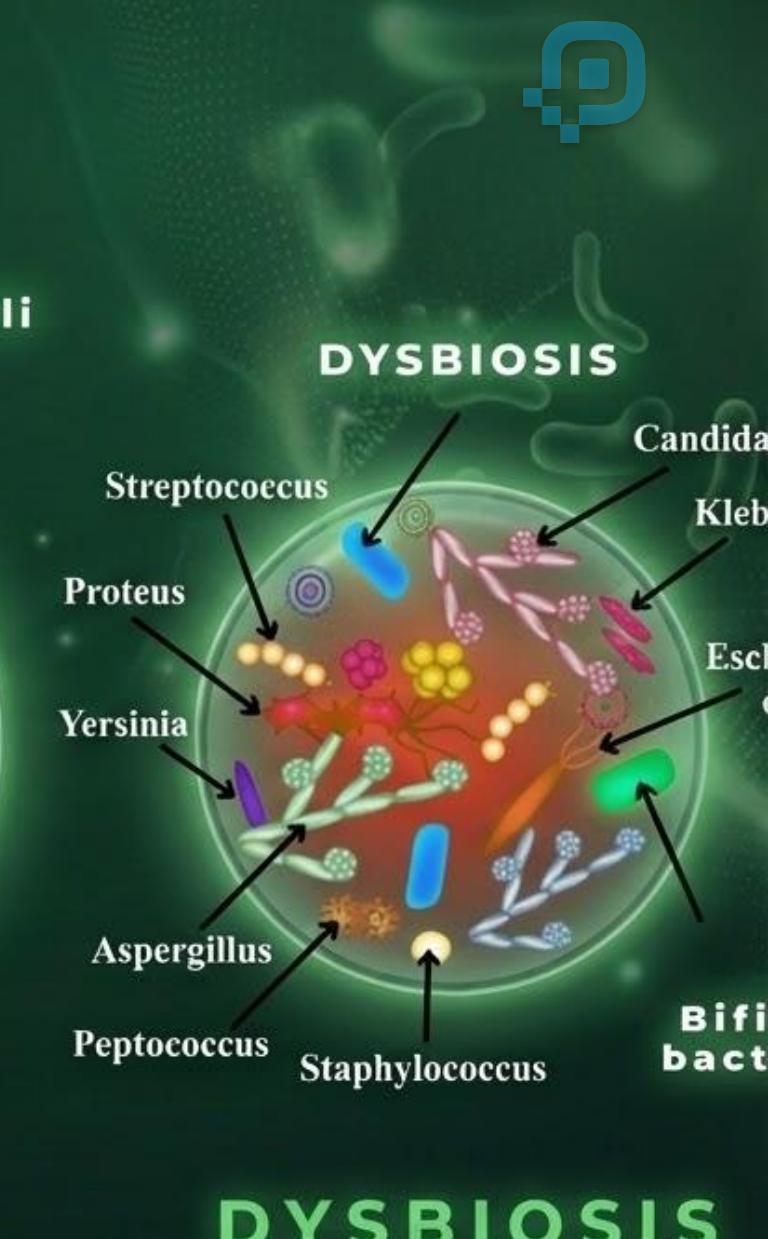

When the Balance is Lost

Dysbiosis (Microbial Imbalance) is the root cause of many GI disorders, triggered by:

-  **Antibiotics:** Killing good bacteria along with bad.
-  **Poor Diet:** Processed foods and sugar.
-  **Stress:** Disrupting the gut-brain axis.

NORMAL

DYSBIOSIS

Introducing Bactogut

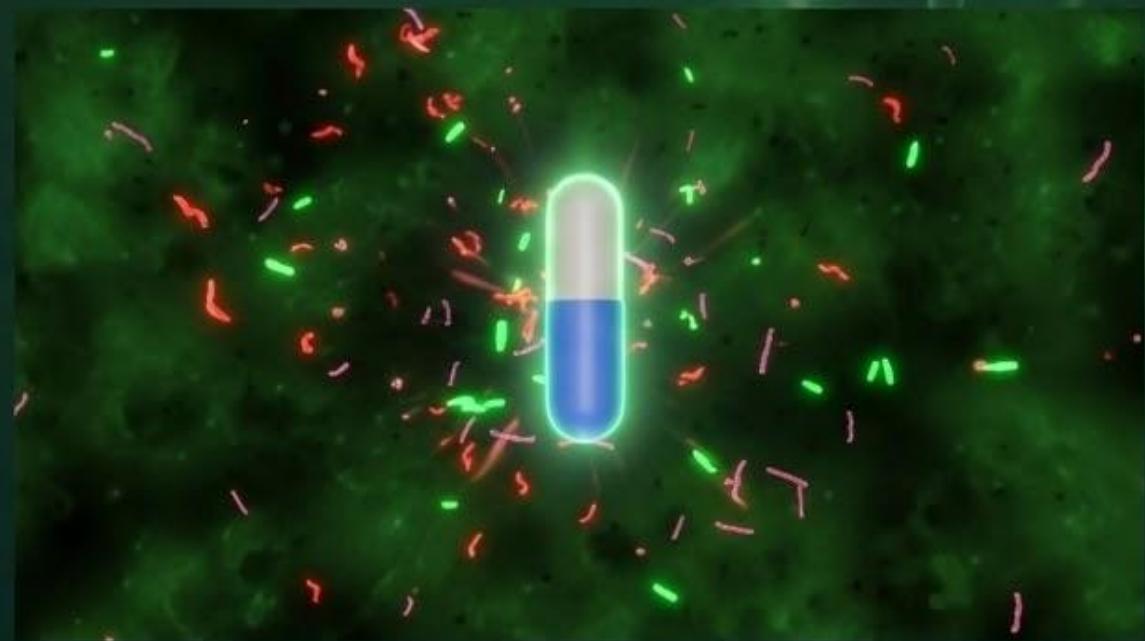

Restoring Life to Your Gut

Bactogut is a high-potency, multi-strain probiotic designed to repopulate the entire gastrointestinal tract.

Diversity is Key:

A single strain isn't enough. Bactogut delivers **13 distinct strains** to address the complexity of the human microbiome.

The Power of 13 Strains

Strain	Potency (CFU)
Lactobacillus Group (Acidophilus, Plantarum, Rhamnosus, Bulgaricus)	5 Billion Total
Bifidobacterium Group (Breve, Longum, Infantis, Lactis)	4 Billion Total
Streptococcus Group (Thermophilus, Salivarius)	2 Billion Total
Other Key Strains (S. Epidermidis, E. Faecalis)	2 Billion Total
Yeast (Saccharomyces Boulardii)	0.1 Billion

Why Multi-Strain?

Complete Coverage

Site Specific: Lactobacilli colonize the small intestine, while Bifidobacteria protect the colon.

Synergy: Different strains work together to outcompete pathogens more effectively than a single strain.

Broad Spectrum: Effective against a wider range of digestive disorders.

The Small Intestine Defenders

L. Acidophilus

Produces lactic acid, **lowering pH** to kill harmful bacteria.

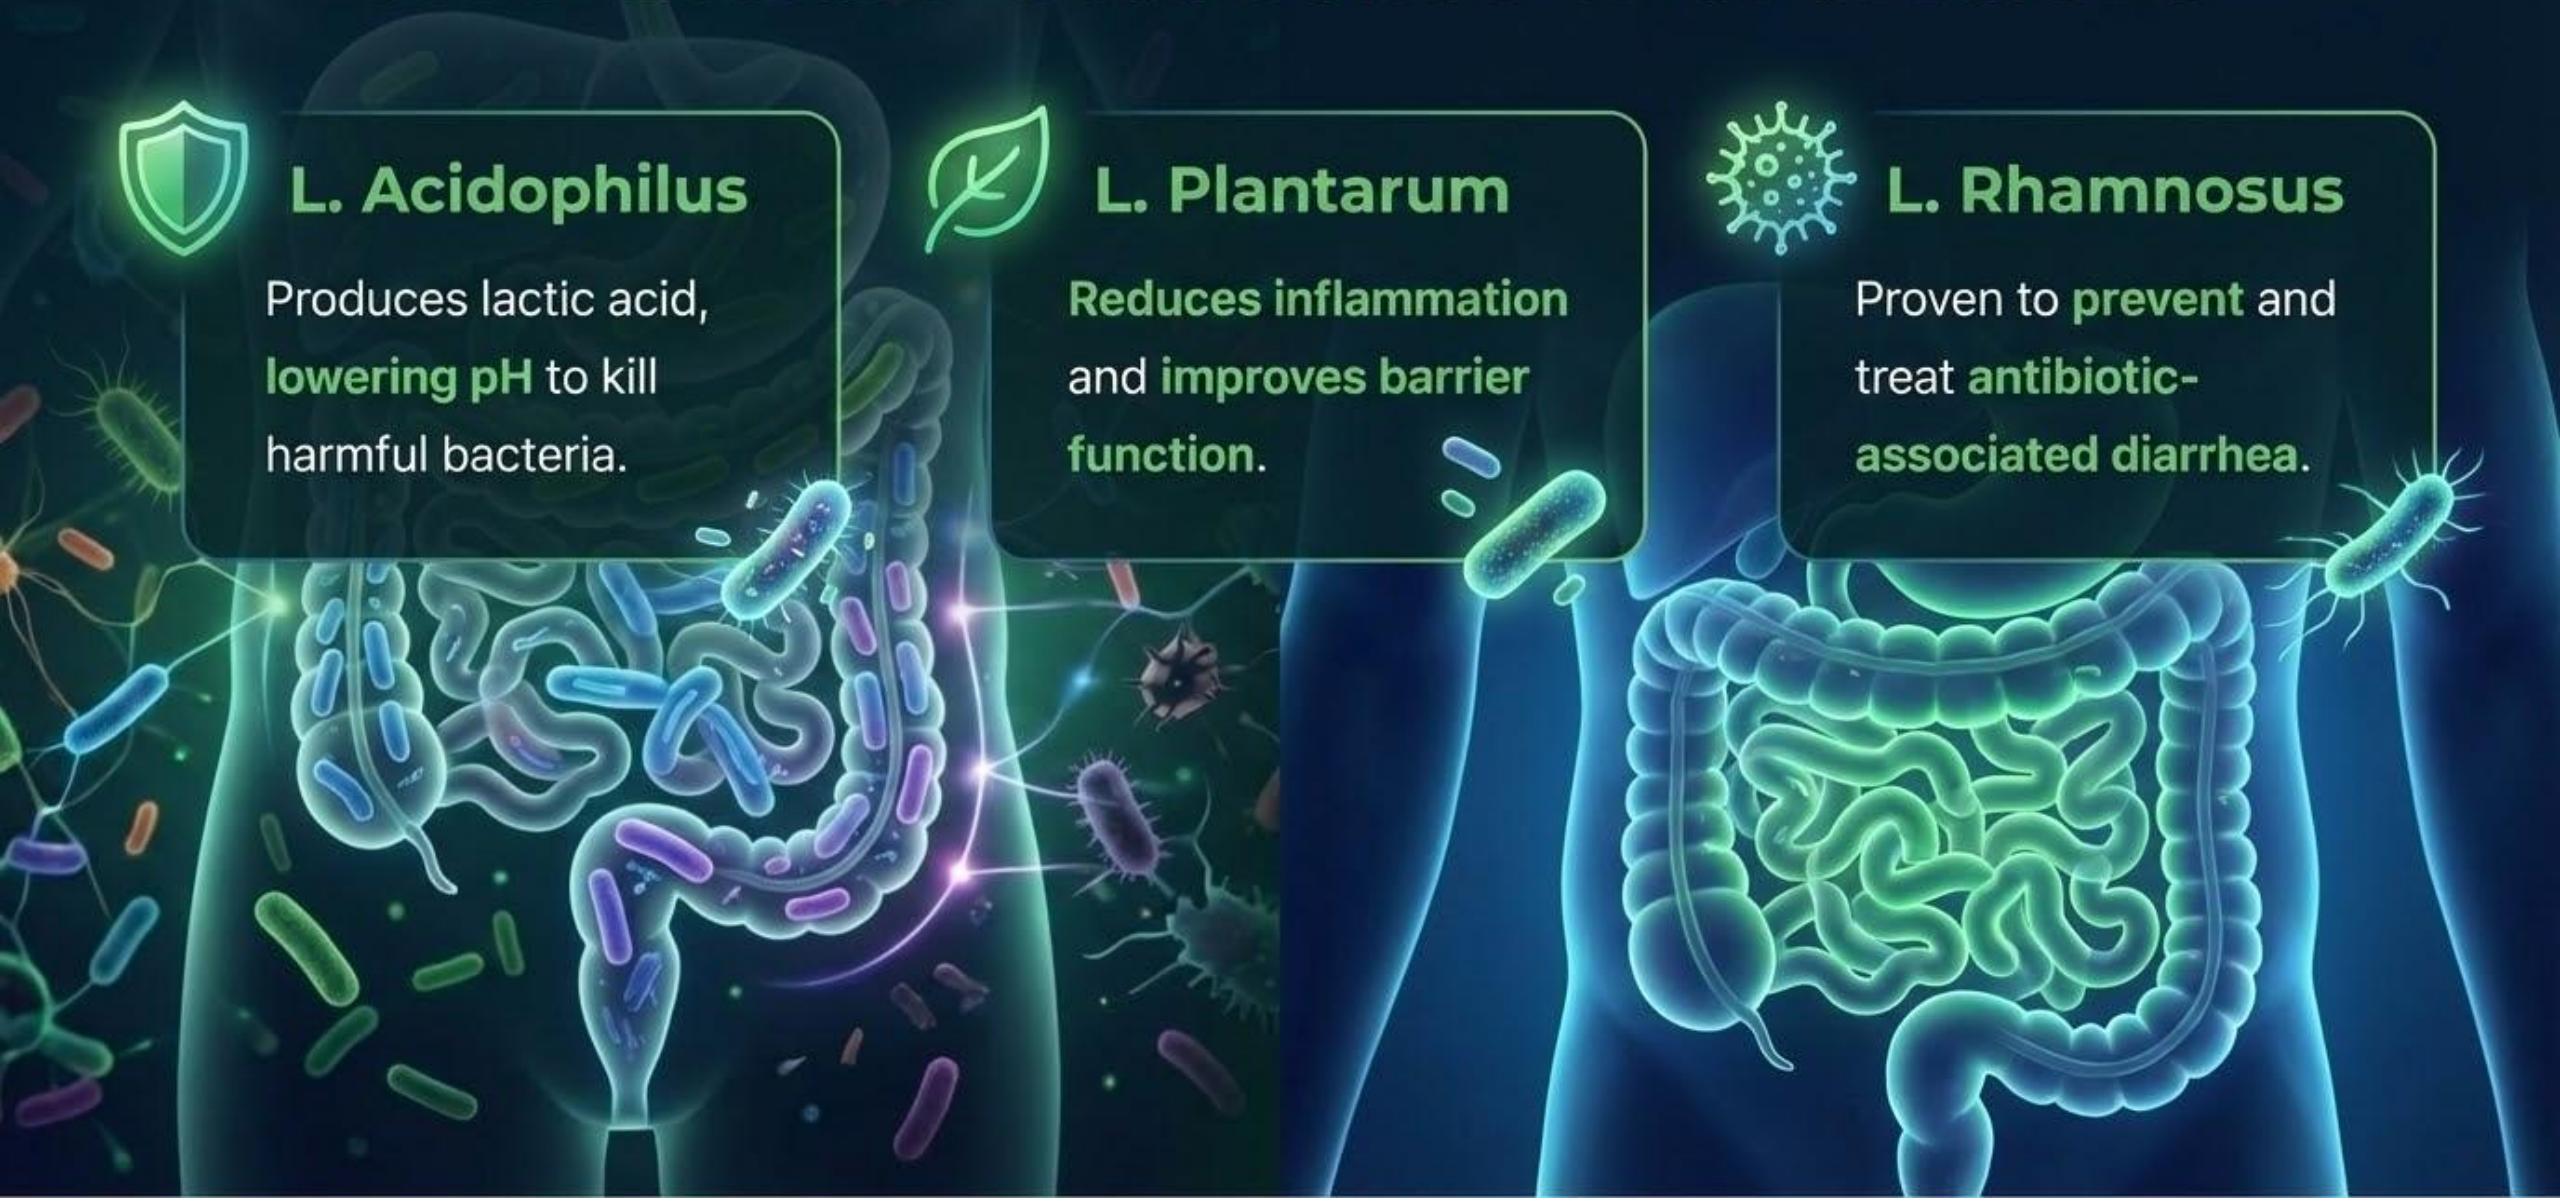

L. Plantarum

Reduces inflammation and **improves barrier function.**

L. Rhamnosus

Proven to **prevent** and treat **antibiotic-associated diarrhea.**

The Colon Commanders

Protecting the Large Intestine

Bifidobacteria are the major inhabitants of a healthy colon.

B. Infantis & Breve: Crucial for immunity and digestion, especially in early life recovery.

B. Longum & Lactis: Aid in regular bowel movements and reduce bloating.

The Unique Specialist

Saccharomyces Boulardii

The only yeast in the formula, providing a unique advantage.

Antibiotic Resistant: Since it's a yeast, antibiotics don't kill it. It works *during* antibiotic therapy.

Toxin Binder: Traps toxins produced by *C. difficile* and flushes them out.

How Bactogut Works

-  **Competitive Exclusion:** Occupies space on the gut wall so pathogens have nowhere to attach.
-  **Acid Production:** Produces Lactic & Acetic acid, creating an environment hostile to bad bacteria.
-  **Immune Boosting:** Stimulates IgA production for better gut immunity.

Indications

AAD

Antibiotic Associated
Diarrhea

Infections

Traveler's Diarrhea &
Gastroenteritis

IBS

Irritable Bowel Syndrome
(Bloating/Pain)

Thank You

Bactogut: Complete Flora Restoration.
